

## **INSTALLATION INSTRUCTIONS**

Before accepting your order, it is necessary to check if the product fits the specifications of the project. The name or code on the box or on the order (sales ticket or picking ticket) does not verify the correct specification. Do a visual inspection of the product to verify that it is the product that you have selected.

Installation Instructions: Follow the applicable recommendations of the TCNA (The Tile Council of North America) Handbook, NTCA (National Tile Council Association) Handbook, and ANSI Standards for the installation. It is required to read and understand the CTDA (Ceramic Tile Distributors Association) Color/Variation Program before installation to correctly understand shade variation. Shade, caliber, and choice must be verified before installation. Before installing, each box of tile should be emptied and blended with all others in the order. This is necessary to achieve a well-blended aesthetic. Tiles should be installed with a tile leveling clip system. Staggered joints on all rectangular tile may not exceed 33% overlap.
